

AMENDMENTS TO THE CLAIMS

The claims in this listing will replace all prior versions, and listings, of claims in the application.

1. (Original) An Internet facsimile apparatus for receiving e-mail data and connected to a computer network, the Internet facsimile apparatus comprising:

an e-mail receiver that receives e-mail data transmitted via the computer network, the e-mail data including a header, document information and image information;

a determiner that determines whether or not the document information contains predetermined data indicating that the e-mail data was transmitted from an Internet facsimile apparatus; and

a printer that prints the entire received e-mail data when said determiner determines that the document information does not contain the predetermined data, and that prints only the image information when said determiner determines that the document information contains the predetermined data.

2. (Original) The Internet facsimile apparatus according to claim 1, a content of the predetermined data is "this mail is accompanied by TIFF-format image data".

3. (Original) The Internet facsimile apparatus according to claim 1, further comprising:

a document information determiner that determines whether or not the document information is contained in the e-mail data received by said e-mail receiver,

wherein said printer prints only the image information when said document information determiner determines that the document information is not contained in the e-mail data.

4. (Original) The Internet facsimile apparatus according to claim 1, said predetermined data indicating that the mail is accompanied by TIFF-format image data.

5. (Original) A method for receiving e-mail data, using an Internet facsimile apparatus connected to a computer network, the method comprising:

receiving e-mail data transmitted via the computer network, the e-mail data including a header, document information and image information;

determining whether or not the document information contains predetermined data indicating that the e-mail data was transmitted from an Internet facsimile apparatus;

printing the entire received e-mail data when the determining determines that the document information does not contain the predetermined data; and

printing only the image information when the determining determines that the document information contains the predetermined data.

6. (Original) The method according to claim 5, a content of the predetermined data is "this mail is accompanied by TIFF-format image data".

7. (Original) The method according to claim 5, further comprising:

determining whether or not the document information is contained in the received e-mail data,

wherein the printing prints only the image information when the determining determines that the document information is not contained in the e-mail data.

8. (Original) The method according to claim 5, the predetermined data indicating that the mail is accompanied by the TIFF-format image data.

9. (Previously Presented) The Internet facsimile apparatus according to claim 1, said determiner being configured to control the printer to print the e-mail data including a header, document information and image information when a TIFF file is not attached to the e-mail and being configured to control the printer to print only the image file when a TIFF file is attached to the e-mail.

10. (Currently Amended) The ~~Internet facsimile apparatus~~ method according to claim ~~[[6]]~~ 5, the determining controlling printing of the e-mail data including a header, document information and image information when a TIFF file is not attached to the e-mail and controlling printing of only the image file when a TIFF file is attached to the e-mail.
